

## Regulation of access and viewing point at Cerje

At the end of August of the last year (2011), the partner of the project, the Municipality of Miren-Kostanjevica, successfully ended the execution of the investment initiative »The regulation of access and viewing point at Cerje". This kind of intervention will successfully contribute to the achievement of the long-term goal of the Municipality, which aims at creating a recognizable tourist area of the "Cerje Park". Based on the natural, cultural and historical conditions, it is supposed to become one of the strategically important elements of cross-border tourist destinations »Karst-Carso" and "Emerald Route".

Within the investment intervention, which was envisaged by the project of KARST-CARSO, the access to the Memorial building as well as the viewing point at Cerje were arranged. The value of construction work, which was held in July and August last year, was € 95,000, of which € 83,000 were financed within the KARST-CARSO project. The construction work, for which the contractor was selected on the basis of tendering for the award of a public contract, included the installation of anti-dust cover of the existing local road in the length of 1,050 m (approx. 5,500 m<sup>2</sup>), the regulation of the car park for cars and buses, as well as the regulation of the viewing platform. The realization of the expected result will be shown in the festive opening this year (2012).
